Report on Results of a Survey on the Citation by Applicants of Prior Art in Patent Applications

This report summarizes the data compiled from a sample of 1,600 allowed applications surveyed in the Office of Patent Program Control during the week of August 30 to September 3, 1976.

This report is being published in response to a number of inquiries relating to how many applicants are currently submitting prior art citations in their patent applications. The statistics are presented without comment.

	Chem.	Elec.	Mech.	Total
(1) Number of applications in sample	476	486	638	1,600
(Percent of total)	30	30	40	
Number of applications having citations submitted in:				
(2) Separate papers only	39	37	57	133

(Percent of sample 5/1)	69	45	51	54

For this survey, "Prior Art" was defined as a specifically identified patent or publication which the applicant cited and considered to be sufficiently relevant that he at least included with the citation, either comments defining the claims over the prior art or a copy of the prior art document.

"Background material" was defined as a specifically identified patent or publication which was cited but not accompanied by either a comment defining the cited document over the application claims or a copy of the prior art document. It should be noted that such "background material" is usually found only in the specifications as filed.

Applications in which the applicant submitted citations in the *specification*.
